

American Wind Wildlife Information Center (AWWIC) Post-Construction Database Templates

AWWIC uses pre-formatted Excel® spreadsheet templates to collect post-construction survey data in a standardized format. Once submitted to AWWI, templates are uploaded to a secure database where companies can view data summaries and AWWI can use the data for analysis.

Templates are designed to accommodate a variety of survey data including:

- Site, phase, and turbine descriptions
- Search protocol
- Searcher efficiency trials
- Carcass removal trials
- Fatality estimates
- Individual fatality incidents
